

DEPLOYMENT REQUIREMENTS

for PHP Webdevelopment Projects of Keios Solutions

Requirement	Software required	Notes
Operating System	Linux Debian 7.4+ preferred.	RedHat / CentOS supported
Webserver Software	Nginx Latest version preferred	
PHP Execution Engine	HHVM Latest version preferred	PHP-FPM 5.6+ supported
Cache Storage	Redis Server Latest version preferred	Memcached supported
Version Control System	Git Latest version preferred	
Additional Tools	Composer Latest version preferred	https://getcomposer.org/
Required PHP Extensions		
CURL PHP Extension		
PDO PHP Extension		
Mcrypt PHP Extension		
ZipArchive PHP Library		
GD PHP Library		

For succesful deployment, **shell access** to the server is required.

Depending on server configuration, **root permissions** may be necessary.

Hardware recommendations are different for every project and should be discussed separately.

If you are not sure about requirements above, please provide clean installation of Debian Linux on Dedicated Server or VPS – our staff will configure it as required.

In case of any questions, please call us at +48 55 88 11 007 or write to info@keios.eu
